

GenFlex Bar Cover Tape applied to primed metal and membrane substrate centered on metal flange edge. Roll 100% to ensure contact, and caulk any exposed joints in the metal on the horizontal surface with GenFlex Termination Caulk.

Metal Drip Edge fabricated and installed to SMACNA recommendations. Fascia portion must be cleated and extend to at least 1/2" (12.70 mm) below wood nailer. Flange securement must be at least 6" o.c. (152.40 mm) and be in staggered rows separated by no more than the fastener head width.

Metalwork by others must be cleaned free of oil and contaminants and primed with GenFlex Primer prior to application of TPO Cover Tape.

**Gravel Stop / Drip Edge
Termination - Uncoated Metal**
