Re: GenFlex GenFast (WH) 2 3/8" Seam Plate
GenFlex GenFast AccuSeam Fastener Kits

GenFlex has taken the "Pain" out of installing seam plates on single ply systems. Like the current GenFlex GenFast 3" Max Seam Plate, the new GenFlex 2 3/8" (WH) Seam Plate now features a "barbless design". The new "Eyehook" design eliminates the potential for cuts and scraps to your hands during the handling and installation of the product. With the improved handling characteristics of the product, installation will be easier.

In addition to the design improvements, code ratings will remain unchanged. This means that the new GenFast (WH) 2 3/8" Seam Plate meets all Factory Mutual uplift ratings that the old barbed design achieved. This will make the inventory transition process that will occur during the beginning of the year extremely easy.

In addition to the new GenFast (WH) 2 3/8" Seam Plate, GenFlex will also make available on a non-stocking basis GenFast AccuSeam Fastening Kits. Each Kits contains 1,000 #15 fastener and 2 3/8" seam plates prepackaged for easy handling and installation with ITW Buildex's AccuSeam™ Tool. The AccuSeam Tools can be purchased from ITW Buildex. The kit products also meet all Factory Mutual uplift ratings and can be used as a substitution for the loose products.

For additional information please review the attached product data sheets or contact your local GenFlex Sales Representative.

Thank you for your continued support of GenFlex Roofing Systems, Your Single Ply Source.

Sincerely,

James E. Burkett
