GENFLEX® TPO MEMBRANE

Effective immediately GenFlex Building Products is requiring a separation sheet or insulation layer when installing GenFlex® TPO mechanically attached roofing systems directly over granular cap sheets, SBS, or smooth surface BUR roofing systems.

The intermediate sheet or layer eliminates the staining or discoloration that could occur when a TPO membrane was installed directly on an existing asphalt system, as well as preventing abnormal wear or damage to the underside of the membrane.

The use of GenFlex® 4 oz. Polyester Felt or any GenFlex insulation products is acceptable. If UL or FM codes are required, please contact the GenFlex Technical Department for assistance to determine what options are available.

If you have any questions regarding this Technical Bulletin or its directive please contact the GenFlex Technical Department.
