

PRE-MANUFACTURED
**METAL EDGE
SYSTEMS**

Edges are Easy with GenFlex

Choose GenFlex for easy-to-install perimeter edge metal systems. GenFlex roof edge products enhance the attractiveness of any EPDM or TPO roof system while serving as the first line of defense against wind uplift and water infiltration.

WHY GENFLEX METAL EDGE SYSTEMS?

AVOID RISK

All Metal Edge system components meet ANSI/SPRI/FM4435/ES-1 & FM Approval, as well as Miami-Dade Approval

SAVE MONEY

Buying pre-manufactured metal edges instead of purchasing and maintaining a machine to fabricate the metal saves money.

SAVE TIME

GenFlex simplifies the process from takeoff to quote to installation. Plus, all the metal edge components necessary for installation are included.

ONLINE TRAINING

GenFlex offers detailed online installation videos and guides to help throughout the installation process.

TOTAL WARRANTY SYSTEM

Contact your local GenFlex Sales Representative for details regarding which Metal Edge products are eligible for a GenFlex Total System Warranty.

GENFLEX FASCIA PROFILES

The fascia, or the transition trim, is both functional and stylish. The cleat and fascia cover is attached to the face of the building to cover the edge of the overlapping membrane and help protect the roof from moisture. Provided in easy-to-install 12 ft. lengths.

- Reduced install time and labor costs thanks to snap-on covers and pre-punched holes
- Excellent edge securement
- Meets building codes for wind uplift
- Delivers lasting roof protection against harsh weather

GENFLEX COPING PROFILES

The coping is sheet metal that is bent to form a continuous cap covering the top of the roof's parapet wall. Today, coping is primarily used as an extra layer of protection.

- Versatility to cover a variety of parapet wall conditions
- Can be installed in multiple scenarios
- Manufactured to the specifications of your project

GENFLEX DRIP EDGE & GRAVEL STOP

The drip edge helps shield the materials on the side of a building from water runoff. The gravel stop is a perimeter edge metal used to terminate the membrane of a low slope roof system and prevent gravel from being washed away. Both components are essential for directing water away from the building.

- GenFlex TPO Skirted Drip Edge comes with factory-applied TPO skirts so contractors save time.
- GenFlex Gravel Stop is quick and easy to install.

GENFLEX COMPLEMENTARY PRODUCTS

GenFlex offers complementary solutions to roof edge metal. These are warrantable and non-warrantable products.

- GenFlex Counterflashing provides a watertight termination at the leading edge of the roofing material.
- GenFlex Industrial Gutters offer easy installation with solid performance and an attractive appearance.
- GenFlex Industrial Downspouts are fabricated in sizes to meet specific job requirements.
